

PETER MITCHELL

Information Technology Graduate

Professional Summary

Detail-oriented and highly adaptive Information Technology graduate with hands-on experience designing, deploying, and maintaining secure server environments, automated scripts, and data-driven applications. Proven capability in Linux systems administration, shell scripting, network troubleshooting, and implementing cybersecurity best practices (least-privilege access, endpoint security). Combines strong technical acumen in full-stack development and infrastructure management with a structured, analytical background from internships at major financial institutions. Exceptional problem-solving skills, calm under pressure during technical outages, and eager to leverage advanced technical skills.

Core Technical Skills

- Operating Systems & Servers: Ubuntu Linux, Windows Server environments, Home-Lab Administration, Virtualisation (Hyper-V/VMware setup), SSH configuration, File Permissions.
- Networking & Infrastructure: DNS Records Management, DHCP, VPNs, VLANs, Wi-Fi infrastructure, Network Watchdog implementations, Hardware-level troubleshooting.
- Cloud & Web Operations: Production Hosting (Netlify), Domain Management & Routing, Google Search Console, SEO Systems Optimisation.
- Methodologies & Project Management: Agile Frameworks, Scrum Methodology, Sprint Planning & Execution, Iterative Development, Git Version Control.

Work Experience

B3N Industries | Co-founder & Head Software Engineer

United States (Remote)

January 2026 - present

- End-to-End Web Deployment: Spearheaded the technical architecture, development, and launch of the company's primary web platform from scratch using HTML5, CSS3, and modern responsive design principles.
- Cloud Hosting & Infrastructure: Architected and managed the production hosting environment on Netlify, ensuring optimal uptime, continuous deployment pipelines, and secure configuration.
- DNS & Domain Management: Handled infrastructure setup, including purchasing, configuring, and managing custom domain names, resolving DNS records, and ensuring proper routing.

Education

Bachelor's of Science in
Information Technology
(Special)

The University of the West
Indies, St. Augustine
September 2021- September
2025

- SEO & Systems Optimisation: Successfully integrated and managed Google Search Console to index the platform, analyse crawl data, monitor web performance, and maximise search visibility.
- Technical Leadership: Acted as the sole technical lead, taking full ownership of system availability, platform troubleshooting, and operational tooling for an emerging US-based startup.

Central Bank of Trinidad and Tobago(2024)

- System & Data Operations: Managed daily high-volume database operations using Excel and specialised financial software (FEDM/FAME), ensuring absolute data integrity, performance accuracy, and efficiency.
- Technical Research & Reporting: Conducted analytical research on direct investment liabilities and authored a comprehensive technical report proposing modernised technological solutions for automated data collection and analysis.
- Methodology Investigation: Investigated data collection methodologies and carbon footprint frameworks of global banking institutions, translating complex data into structured, actionable intelligence for leadership.
-

Normal Gabriel Limited Insurance Brokers(2022-2023)

- Records & Document Management: Supervised a high-volume physical and digital filing initiative, standardising data organisation to optimise information retrieval and ensure compliance with strict record-keeping policies.
- Financial Reconciliation: Completed precise bank reconciliations for corporate accounts, cross-referencing ledger data to identify and resolve systemic financial discrepancies.
